I. Purpose and Scope

The purpose of the Data Curation Query Package v5.10 is to characterize the data in PCORnet Common Data Model (CDM) v5.1. This package examines all 22 tables but characterization of the HASH_TOKEN table is limited to assessing table-level conformance. The package consists of a potential code errors query, a data curation query and an Empirical Data Curation Report which summarizes key information from the query output and evaluates the results against PCORnet's Data Check v7. Output tables will be produced by running SAS programs against static local DataMarts in PCORnet CDM v5.1 with SAS data types.

Query results will be used by the PCORnet Coordinating Center's Distributed Research Network Operations Center (DRN OC) to ensure a foundational level of data quality across the networks. Approved results may be used to provide initial feasibility estimates for prep-to-research queries, inform study planning activities, and to create DataMart-level, HPRN/CRN-level or network-level reports. Data aggregated at the network level may be shared publicly. DataMart-level results such as the metadata transparency reports may be published within PCORnet upon review and approval by the HPRN/CRN principal investigator (PI).

To provide the DRN OC with additional insight into the query results, the ETL Annotated Data Dictionary (ETL ADD) must be updated prior to submitting the response to this query. The ETL ADD is stored in a REDCap® database.

Low Cell Count Threshold

Users may specify a low cell count threshold that establishes the minimum number of observations required to protect against possible identification of subject data. Query results greater than zero and less than the threshold will be changed to BT (below threshold) and treated as missing. For example, if a DataMart sets a low cell count threshold of 5, cell counts between 1 and 4 will be changed to BT. The low cell count threshold applies to all query results except for descriptive statistics. The low cell count threshold treatment for each query is shown in Section IV.

The default low cell count threshold value is set to zero (0) in accordance with the PCRF Scope of Work. If this value is changed it will be highlighted in orange in the Empirical Data Curation report.

Potential Code Errors Report

The query package produces a Potential Code Errors report which identifies exceptions to the expected code length or content for ICD9/ICD10 diagnosis codes; ICD9/ICD10-PCS and CPT/HCPCS procedure codes; LOINC codes; RXNORM_CUI codes; and NDC codes by applying the heuristics described in Section II.

Data curation output tables

The query package produces up to 258 query output tables depending on how many CDM tables are populated. Information about each output table is provided in Sections IV and Sections XI-XXXIII. Please note that for tables which are cross-tabs of two fields, the table shells only contain certain example cells.

Empirical Data Curation Report

The query package produces an Empirical Data Curation (EDC) report. The EDC Report summarizes key information from the data curation query ouput tables and identifies exceptions to the PCORnet Data Checks v7. The table of contents is shown in Section V.

Lookback Date

The lookback date is the earliest date included in the query results. Lookback date will be calculated by subtracting lookback period from the Query Response Date which is the date the data curation query (specifically, the cross-table portion) was run. The default lookback period is 20 years (240 months). **The lookback value should not be modified unless you are instructed to do so.**

This date restriction does not apply to the DEMOGRAPHIC, DEATH, HARVEST, DEATH_CAUSE, PROVIDER or LDS_ADDRESS_HISTORY tables. The dates used to select records in the other tables are ENROLLMENT.ENR_START_DATE, ENCOUNTER.ADMIT_DATE, DIAGNOSIS.ADMIT_DATE, PROCEDURES.ADMIT_DATE, VITAL.MEASURE_DATE, DISPENSING.DISPENSE_DATE, LAB_RESULT_CM.RESULT_DATE, CONDITION.REPORT_DATE, PRO_CM.PRO_DATE, PRESCRIBING.RX_ORDER_DATE, PCORNTRIAL.TRIAL_ENROLL_DATE, MED_ADMIN.MEDADMIN_START_DATE, OBS_CLIN.OBSCLIN_DATE, OBS_GEN.OBSGEN_DATE and IMMUNIZATION.VX_RECORD_DATE. Since some of these variables do not have to be populated, records with missing dates will also be included in the data curation query.

Questions about this query package should be sent to Laura Qualls (laura.qualls@duke.edu) and Sujung Choi (sujung.choi@duke.edu).

II. Potential Code Errors Query

The purpose of the Potential Code Errors Program is to help network partners identify exceptions to the expected formats for selected codes. Output tables will be produced by running SAS programs against static local DataMarts in PCORnet CDM 5.1 format with SAS data types.

This program identifies exceptions to the expected code length or content for 8 coding terminologies used in one or more CDM tables. Heuristics are conservative to allow for all potential implementations (e.g. current LOINC codes are 5+ digits, but the program allows for the shorter deprecated codes; ICD10 procedure codes must be 7 alphanumeric chara). These heuristics will **not** identify all erroneous codes, and will only evaluate codes which are classified as one of the qualifying terminologies (e.g. a ICD9 diagnosis code labeled as a SNOMED-CT code type will not be evaluated). The CDM specifications (available on pcornet.org) provide guidance on addressing potential errors (General Implementation Guidance issue #5). The heuristics and CDM tables for each terminology are shown in the table below.

Terminology	Unexpected length (after removing decimals if applicable)	Unexpected string	Unexpected alphabetical character	Unexpected numeric character	CDM tables
ICD9 diagnosis	Not 3-5	000.x	Any alphabetical character other than E or V	No numeric characters	CONDITION; DIAGNOSIS; OBS_GEN
ICD10 diagnosis	Not 3-7	000.x or 999.x	First character is not alphabetical	No numeric characters	CONDITION; DIAGNOSIS; OBS_GEN
CPT/HCPCPS	Less than 5	00000x or 99999x	n/a	No numeric characters	IMMUNIZATION; OBS_GEN; PROCEDURES;
ICD9 procedures	Not 3-4	00.00	Any alphabetical character	n/a ^c	OBS_GEN; PROCEDURES
ICD10 procedures	Not 3-7 ^a	0000000 or 9999999	n/a	n/a	OBS_GEN; PROCEDURES
NDC	Not 11	00000000000 or 99999999999	Any alphabetical character ²	n/a ^c	DISPENSING; IMMUNIZATION; MED_ADMIN; OBS_GEN; PROCEDURES
RXNORM_CUI	Not 2-7	n/a	Any alphabetical character	n/a ^c	IMMUNIZATION; MED_ADMIN; OBS_GEN; PRESCRIBING
LOINC	Not 3-7 ^b	No hyphen in the penultimate position	Any alphabetical character	n/a ^c	LAB_RESULT_CM; OBS_CLIN; OBS_GEN

a. Must be 7 digits for billing but this allows for shorter codes which may appear in electronic health record data.

b. Current LOINC codes are 5+ digits but this allows for shorter deprecated codes.

c. Redundant with the unexpected alphabetical character rule.

III. Data Curation Query Definitions

The definitions for variables included in the query output are as follows:

- ADMIT_DATE Mismatch: These fields are replicated from the ENOUNTER table to the PROCEDURES and DIAGNOSES table. The number of mismatched records is the number of records in PROCEDURES or DIAGNOSIS where these fields do not match the value in the ENOUNTER table.
- ALL_N or RECORD_N or N: Count of records with non-missing values for the specified field.
- DATASET: CDM table name
- DISTINCT_N: Count of records with unique values for the specified field.
- DISTINCT_ENC_ID_N: Count of records with unique values for ENOUNTERID.
- DISTINCT_PATID_N: Count of records with unique values for PATID.
- DISTINCT_VISIT_N: Count of unique visits in the ENOUNTER table. Visits are a concatenation of PATID + PROVIDER_ID + ENC_TYPE + ADMIT_DT.
- ELIG_RECORD_N: Count of records in the ENOUNTER table where PATID, PROVIDER_ID, ENC_TYPE, and ADMIT_DT are all populated.
- ENC_TYPE Mismatch: These fields are replicated from the ENOUNTER table to the PROCEDURES and DIAGNOSES table. The number of mismatched records is the number of records in PROCEDURES or DIAGNOSIS where these fields do not match the value in the ENOUNTER table.
- EXP_SPECIMEN_SOURCE: The expected specimen source based on the values established by LOINC®.
- KNOWN_TEST: Total number of records where LAB_LOINC is not null.
- KNOWN_TEST_RESULT: Total number of records where (1) LAB_LOINC is not null and (2) RESULT_NUM is not null and RESULT_MODIFIER is not in (null, NI, UN, OT) or (3) RESULT_QUAL is in ("BORDERLINE", "POSITIVE", "NEGATIVE" or "UNDETERMINED")
- KNOWN_TEST_RESULT_NUM: Total number of records where the test and result are known, as follows: (1) LAB_LOINC is not null and (2) RESULT_NUM is not null and (3) RESULT_MODIFIER is not in (null, NI, UN, OT).
- KNOWN_TEST_RESULT_NUM_SOURCE: Total number of records where the test and result are known, as follows: (1) LAB_LOINC is not null and (2) RESULT_NUM is not null and (3) RESULT_MODIFIER is not in (null, NI, UN, OT) and (4) SPECIMEN_SOURCE is not in (null, NI, UN, OT, UNK_SUB, SMPLS, SPECIMEN)
- KNOWN_TEST_RESULT_NUM_UNIT: Total number of records where the test and result are known, as follows: (1) LAB_LOINC is not null and (2) RESULT_NUM is not null and (3) RESULT_MODIFIER is not in (null, NI, UN, OT) and (4) RESULT_UNIT is not in (null, NI, UN, OT)
- KNOWN_TEST_RESULT_NUM_SRCE_UNIT: Total number of records where the test and result are known, as follows: (1) LAB_LOINC is not null and (2) RESULT_NUM is not null and (3) RESULT_MODIFIER is not in (null, NI, UN, OT) and (4) SPECIMEN_SOURCE is not in (null, NI, UN, OT, UNK_SUB, SMPLS, SPECIMEN) and (5) RESULT_UNIT is not in (null, NI, UN, OT)
- KNOWN_TEST_NUM_RESULT_RANGE: Total number of records where the test, numeric result, and normal range are all known, as follows: (1) LAB_LOINC is not null and (2) RESULT_NUM is not null and (3) RESULT_MODIFIER is not in (null, NI, UN, OT) and (4) one of the following is true: (4a) NORM_MODIFIER_LOW='EQ' and NORM_MODIFIER_HIGH='EQ' and NORM_RANGE_LOW is not null and NORM_RANGE_HIGH is not null or (4b) NORM_MODIFIER_LOW in ('GT', 'GE') and NORM_MODIFIER_HIGH='NO' and NORM_RANGE_LOW is not null and NORM_RANGE_HIGH is null or (4c) NORM_MODIFIER_HIGH in ('LE', 'LT') and NORM_MODIFIER_LOW='NO' and NORM_RANGE_HIGH is not null and NORM_RANGE_LOW is null.
- NMISS or NULL_N: Count of records with null or missing values for the specified field.
- ENOUNTERID Orphan: An ENOUNTERID which is not in the ENOUNTER table and appears in any other table.

- PATID Orphan: A PATID which is not in the DEMOGRAPHIC table and appears in any other table.
- PROVIDERID orphan: A PROVIDERID which is not in the PROVIDER table and appears in any other table.
- RECORD_PCT: The percent of all records. Will be blank for rows with values of 0 or BT (below threshold).
- RECORD_N_RXCUI: Count of records with non-missing values for RXNORM_CUI.
- RECORD_N_LOINC: Count of records with non-missing values for LOINC.
- RESPONSE_DATE: Date the query package was run (ie, SAS system date).
- QUERY_PACKAGE: Query package name.
- RXNORM_CUI_TTY_TIER: The term type (TTY) that the RXNORM_CUI is mapped to. Tier 1: RXNORM_CUI_TTY in ('SCD','SBD','BPCK','GPCK'). Tier 2: RXNORM_CUI_TTY in ('SBDF','SCDF','SBDG','SCDG','SBDC','BN','MIN'). Tier 3: RXNORM_CUI_TTY in ('SCDC','PIN','IN'). Tier 4: RXNORM_CUI_TTY in ('DF','DFG'). NULL or missing=RXNORM_CUI_TTY=NULL or missing'.
- STAT: Descriptive statistic (e.g. minimum, maximum, median).
- TAG: CDM field name
- VALID_N: Number of records in a valid format. Used for fields without a prespecified value set.
- VISIT: As stated in the PCORnet Common Data Model, for the Encounter table, “each record will generally reflect a unique combination of PATID, ADMIT_DATE, PROVIDERID, and ENC_TYPE”. Thus, a visit is a concatenation of PATID + ADMIT_DATE+ PROVIDERID + ENC_TYPE.

135	MULTIPLE	elapsed_lab	Displays the query start time, query end time, and query run time for each table created by the data_curation_lab program, the cumulative run time for the program and the dataset loading time.
136	MULTIPLE	elapsed_xtbl	Displays the query start time, query end time, and query run time for each table created by the data_curation_xtbl program, the cumulative run time for the program and the dataset loading time. The DATAMART_ALL table is not included because it is just a print.
137	MULTIPLE	xtbl_l3_dash1	Counts the number of patients with any VITAL record with a populated MEASURE_DATE and a diagnosis record with a populated ADMIT_DATE and DX during the designated period prior to the maximum DIAGNOSIS.ADMIT_DATE. If the maximum ADMIT_DATE is in the future, the current date is substituted.
138	MULTIPLE	xtbl_l3_dash2	Counts the number of patients with any VITAL record with a populated MEASURE_DATE and a DIAGNOSIS record with a populated DX and ADMIT_DATE and either a PRESCRIBING record with a populated RXNORM_CUI and RX_START_DATE or a DISPENSING record with a populated DISPENSE_DATE and NDC during the designated period of time prior to the maximum DIAGNOSIS.ADMIT_DATE. If the maximum ADMIT_DATE is in the future, the current date is substituted.
139	MULTIPLE	xtbl_l3_dash3	Counts the number of patients with any VITAL record with a populated MEASURE_DATE and a DIAGNOSIS record with a populated DX and ADMIT_DATE and either (a PRESCRIBING record with a populated RXNORM_CUI and RX_ORDER_DATE or a DISPENSING record with a populated DISPENSE_DATE and NDC) and a LAB_RESULT_CM record and RESULT_DATE during the designated period of time prior to the maximum DIAGNOSIS.ADMIT_DATE. If the

140	MULTIPLE	xtbl_l3_date_logic	Identifies illogical relationships between BIRTH_DATE, DEATH_DATE, and key dates in other tables
141	MULTIPLE	xtbl_l3_dates	Descriptive statistics and counts of records with future dates or dates prior to January 2010 for all date fields.
142	MULTIPLE	xtbl_l3_lab_enctype	# of records and patients with lab records by encounter type.
143	MULTIPLE	xtbl_l3_metadata	HARVEST fields; maximum refresh date; query package; response date; low cell count threshold; operating system; SAS version and packages; SAS datastore (data or views); and query run time. There should only be 1 record in this table. The DATAMARTID and REFRESH_MAX fields are used extensively throughout the query package.
144	MULTIPLE	xtbl_l3_mismatch	Counts the number of records where there is a mismatch between a parent and child table. These checks include ENCOUNTERIDs that are not in the ENCOUNTER table; PATIDs that are not in the DEMOGRAPHIC table; PROVIDERIDs that are not in the PROVIDER table; and discordance in the fields that are replicated from the ENCOUNTER table to the PROCEDURES and DIAGNOSIS tables.
145	MULTIPLE	xtbl_l3_non_unique	Identify encounters which are associated with more than 1 patient (PATID) in the same table
146	MULTIPLE	xtbl_l3_pres_enctype	# of records and patients with prescribing records by encounter type.
147	MULTIPLE	xtbl_l3_times	Descriptive statistics for all time fields.
148	MULTIPLE	xtbl_l3_race_enc	# of records and patients by RACE among patients with at least 1 encounter after 2009(from 2010)
149	OBS_CLIN	obsclin_l3_n	Counts OBSCLINID and PATID

V. Empirical Data Curation Report

The data from all data curation query output tables except for the *elapsed* datasets is compiled into a normalized dataset. The Empirical Data Curation (EDC) Report is produced from this dataset. The EDC Report summarizes key information from the query ouput tables and identifies exceptions to the PCORnet Data Checks v7. The report includes a table of contents, a data check exception summary, and up to 52 tables and charts, depending upon the number of CDM tables which are populated. The table of contents is below.

Section	Table	Table Description	Data Check(s)
n/a	n/a	Data Check Exception Summary	n/a
Section I: Descriptive Information	Table IA	Demographic Summary	n/a
	Table IB	Potential Pools of Patients	3.04, 3.05
	Table IC	Height, Weight, and Body Mass Index (BMI)	n/a
	Table ID	Records, Patients, Encounters, and Date Ranges by Table	n/a
	Table IE	Records Per Table by Encounter Type	n/a
	Table IF	Date Obfuscation or Imputation	n/a

VI. Program Package File Structure

Each request package distributed by PCORnet's DRN OC contains several sub-folders to organize program inputs and outputs. The subfolders must reside within an outer folder labeled with the query name designated in the DRN Query Tool, e.g. PROD_P02_DQA_FDPRO_DCQ_NSD1_c003_r001.

The subfolders are as follows:

- ***dmlocal***: Contains output generated by the request that should be saved locally but not returned to DRN OC. Output may be used locally or to facilitate follow-up queries.
- ***drnoc***: Contains output generated by the request that should be returned to the DRN OC via the PCORnet DRN Query Tool. These tables consist of aggregate data/output and transfer the minimum required to answer the analytic question.
- ***sasprograms***: Contains the master SAS program that must be edited and then executed locally.
- ***infolder***: Contains all input programs and files needed to execute the request. These are created for each request by the DRN OC Data Curation team; the contents of this folder should not be edited.

VII. Files Included in Query Request

IX. Query Input and Output Diagram

The diagram below illustrates how the query package uses information from the CDM tables and prior data curation results to produce the datasets in the *dmlocal* folder.

*These must match the EDC Report that was approved by the Coordinating Center

X. Responding to the Query Package

- 1) Prepare for the query as instructed in the Query Package Checklist.
- 2) Go to the DataMart Client and open the query package. Extract the contents, save them locally as described in Sections VI, and create the *drnoc* and *dmlocal* folders.
- 3) If the CDM data is stored in database tables, do the following. Otherwise proceed to Step 4.
 - a) Consider compressing large tables to improve query response time.
 - b) Modify the user inputs to use appropriate SAS/ACCESS options on a LIBNAME statement so that the program knows where to find the database tables. The examples below show connection information for an Oracle database; connecting to other database systems may require different connection information.
 - (1) In the *sasprograms* folder, open **01_run_code_errors.sas**, **02_run_queries.sas** and **04_run_edc_report.sas** and edit the *dpath* variable to include the appropriate database connection information. Be sure to use the `%str()` function to mask the embedded equal signs. For example:

```
%let dpath = %str(oracle user="myuserid"  
orapw=mypassword path=mydbname schema=myschema);
```
 - (2) In the *infolder* folder, open the **data_curation_query_base.sas** program edit the *libname pcordata* statement on Line 32 to remove the quotation marks, as: `libname pcordata &dpath;`
- 4) Open all programs in the *sasprograms* folder and modify the directory paths and inputs as instructed below. For reasons of compatibility and standardization, directory paths must meet the following criteria:
 - DO use forward slashes (e.g. `/`) which are always compatible on both UNIX and WINDOWS.
 - DO use end of path separators (e.g. `/xyz/` and not `/xyz`) which are assumed by many programs.
 - DO use beginning of path separators (e.g. `/xyz`) on UNIX.
 - DO NOT use beginning of path separators on WINDOWS (e.g. `P:/xyz` not `/P:/xyz`).
 - DO NOT surround directory paths with quotes (e.g. `/xyz/` not `"/xyz"`).
 - a) After `%let dpath=`, provide the directory path where your PCORnet CDM SAS data is located.
 - b) After `%let qpath=`, provide the outer folder where the required folders were created.
 - c) In the **02_run_queries.sas** program, populate the following user inputs.
 - i) After `%let threshold=`, leave the default value of 0.
 - ii) After `%let _grp,` provide one of the query group process option: `all`, `main`, `lab`, or `xtbl`.
 - (1) *To run the programs all at once:* Select “`all`” to run the data curation query programs as a batch; this option is recommended if you are not an experienced SAS user and for the final submission to the DRNOC.
 - (2) *To run the programs sequentially:* This is recommended for partners who have long run times and want to be able to remediate issues which only affect certain tables more easily. To do so, select one of the 3 options (`main`, `lab`, or `xtbl`) for the initial run and then repeat with the remaining options as instructed in Step 6.
 - iii) After `%let lookback=`, leave the default value of 20.
 - d) In the **04_run_edc_report.sas** program, after `%let ppath=`, provide the outer folder containing the most recently approved query results (i.e. results for the previous DataMart refresh).
- 5) Open the **01_run_code_errors.sas** program. Run the program and review the log and output as instructed in the Query Package Checklist.
- 6) Open the **02_run_queries.sas** program. Run the program, either 1 time if you selected `%let _grp=all`, or 3 times in the sequence you desire (e.g. first with `lab`, next with `xtbl`, and finally with `main`). As it processes each query program, the program will print results to a PDF file, create permanent SAS datasets for each output table, and import all permanent SAS datasets into a SAS transport file. Review the logs and output (see section VIII) as instructed in the Query Package Checklist. You may wish to review the output tables which could contain required data check exceptions before proceeding (e.g. from `xtbl`, review `XTBL_L3_MISMATCH` and `XTBL_L3_NONUNIQUE`). If

you are working in Windows and executing the queries sequentially, you will need to close all open applications (e.g. PC SAS and Microsoft Word) before running the next program. Otherwise, you will get an error message from SAS like “Fatal ODS error has occurred. Unable to continue processing this output destination” and “File is in use”. You can monitor the query progress by checking the [DMID]_[DATE]_data_curation_progress_report.rtf document in the *drnoc* folder. Depending on your SAS processing environment, you may also see the same information in the SAS OUTPUT window or RESULTS window.

- 7) Open and run the **03_run_edc_prep.sas** program. All data curation datasets must be present before proceeding with the EDC portion of this package. To ensure that this is the case, review the output in the result window. You should see a statement that says “No datasets are missing”. If a dataset is missing, it will be listed in the output. If there is no output, confirm that you entered the correct information after %let qpath=. If necessary, rectify problems by returning to the **02_run_queries.sas** program to create the missing datasets.
- 8) Open and run the **04_run_edc_report.sas** program. This program will first call the **normalization.sas** program to create a dataset which combines all the data curation query output tables and then call **edc_report.sas** to create the EDC report from the normalized dataset and print results to a PDF file. Review the logs and output as instructed in the Query Package Checklist.
- 9) If you need to modify your data after running the queries, follow these guidelines for re-running the **02_run_queries.sas** programs, and then rerun the **03_run_edc_prep.sas** and **04_run_edc_report.sas** programs.
 - a) You must re-run the main program unless the only change you made is to a field in the HARVEST table that is not a REFRESH date or the DATAMARTID.
 - b) You must re-run the *xtbl* program if any of the following changes occurred: records were added or deleted, dates were changed, identifiers were changed, RACE or ENC_TYPE were changed, or anything in the HARVEST table was changed.
 - c) You must re-run the *lab* program if you make any changes to the LAB_RESULT_CM table.
- 10) Update the online ETL Annotated Dictionary as instructed in the Query Package Checklist.
- 11) If desired, verify the contents of the cpt files by using a `proc cimport` statement, as shown in the example below:

```
libname outlib 'F:/pcornet/myproject/';
%let infile= 'F:/pcornet/myproject/T1D3_20151101_data_curation.cpt';
proc cimport infile=&infile library=outlib;
run;
```
- 12) Return the files in the *drnoc* folder (see section VIII), a completed Investigative Data Check 2.06 Exceptions spreadsheet if applicable, and a signed Query Package Checklist. If there is more than one version of any of the files in the *drnoc* folder, archive and/or delete the earlier versions and only return the ones with the most recent date (i.e., those reflecting the final results).
- 13) Retain all output from the final run in the *dmlocal* folder for use in future queries as shown in Section IX.

XI. Table Shells: Potential Code Errors

code_summary

Note: This dataset will include 1 row for each observed combination of table and code type.

Field	Description
TABLE	DIAGNOSIS, DISPENSING, LAB_RESULT_CM, MED_ADMIN, OBS_GEN, OBS_CLIN, PRESCRIBING, or PROCEDURES
CODE_TYPE	09,10, CH, ND, LC, or RX
BAD RECORDS	Count of potentially bad records
TOTAL RECORDS	Count of total records
PCT	The percent of records which are potentially bad records.

bad_dx; bad_px; bad_disp; bad_pres; bad_lab; bad_medadmin; bad_obsclin; bad_obsgen

Note: Tables will only be created if the table contains at least 1 record for the relevant code types.

Field	Description
[Varies]	Pseudoidentifier for the table, e.g. encounterID
CODE_TYPE	09,10, CH, ND, LC, or RX
CODE	The code. This field is renamed from the table-specific fields, e.g. DX, PX, LAB_LOINC, and MEDADMIN_CODE.
CODE_CLEAN	Uppercase code which discards decimals, dashes, commas, spaces and trailing blanks
CODE_LENGTH	Length of code_clean
ANYALPHA	The position of the first alphabetical character; 0 if there are no alphabetic characters
ANYDIGIT	The position of the first numeric character; 0 if there are no numeric characters
TABLE	DIAGNOSIS, DISPENSING, LAB_RESULT_CM, MED_ADMIN, OBS_GEN, OBS_CLIN, PRESCRIBING, or PROCEDURES
UNEXP_LENGTH	Error indicator. Yes=1; No=0; null=not applicable.
UNEXP_ALPHA	Error indicator. Yes=1; No=0; null=not applicable.
UNEXP_STRING	Error indicator. Yes=1; No=0; null=not applicable.
UNEXP_NUMERIC	Error indicator. Yes=1; No=0; null=not applicable.

This query counts the number of distinct encounters in the DIAGNOSIS table by the presence or absence of any diagnosis with PDX=P. P means that the encounter has at least 1 principle diagnosis; U means that the encounter's principle diagnosis is unknown.

XXXIV. Version History

Date	Version	Description
Feb 3, 2016	v3.00	Original release.
Mar 17, 2016	v3.01	Corrected truncation of some query results by increasing field lengths. In VITAL_L3_HT, height categories of "<0" and "0-10" were both displaying as "0-10" due to a precision issue with PROC FORMAT/PROC MEANS; this was corrected. In PRO_L3_PXDATE_Y was incorrectly labeled ADMIT_DATE; this was corrected to PX_DATE. Updated all documentation and code to v3.01.
Nov 7, 2016	v3.02	Added queries of DEATH, DISPENSING, LAB_RESULT_CM, and PRESCRIBING (35 queries). Added 7 cross-table queries. Revised 14 queries (retained backwards compatibility). Revised the low cell count threshold logic to conform to PCORnet's new minimum bin size policy. Added the Empirical Data Curation Report.
Nov 18, 2016	v3.03	Eliminated the need for the SAS ACCESS/Interface to PC Files module. Resolves the following warning: "WARNING: In a call to the CATS function, the buffer allocated for the result was not long enough to contain the concatenation of all the arguments."

Mar 21, 2017	v3.04	Modified the program so that optional variables which are 100% missing will not cause errors or omissions. In ENC_L3_ENCTYPE, corrected the calculations for ELIG_RECORD_N and UNIQUE_VISIT_N. In XTB1_L3_DASH2 and XTB1_L3_DASH3, changed the logic to use PRESCRIBING_RX_ORDER_DATE instead of RX_START_DATE. In XTB1_L3_DASH3, changed the logic to not require LAB_RESULT_CM.LAB_NAME to be populated. In Empirical Data Curation (EDC) Table IIE, corrected the highlighting and added the PRESCRIBING table for orphan ENOUNTERIDS. In Table IIIB, corrected the percentage calculations. In EDC Table IVD, corrected the "% of encounters without a principal diagnosis" calculation.
Jul 5, 2017	V3.10	Modified queries to conform to CDM v3.1. Added queries of the CONDITION, PCORNTRIAL, DEATH_CAUSE, and PRO_CM tables. Added 12 queries pertaining to previously characterized tables. Revised 31 queries. Incorporated PCORnet Data Checks v3.
Sept 18, 2017	V3.11	In the Data Curation query, corrected an omission in the "enc_l3_enctype_disisp" query. In EDC Table IIB, added RX_QUANTITY_UNIT and corrected calculation for PX_TYPE. In EDC Table IVC, added DX_ORIGIN. In EDC Table IVE, corrected the percentage calculation.
Nov 20, 2017	V3.12	Incorporated the PCORnet Code Errors v3 program. In the Data Curation query, added 13 queries pertaining to previously characterized tables; revised 3 queries; and deprecated 6 queries. In the Empirical Data Curation report, incorporated PCORnet Data Checks v4, added 1 table, and revised 14 tables.
June 8, 2018	V4.10	Modified existing queries to conform to CDM v4.1. Incorporated the PCORnet Code Errors v5 program. In the Data Curation query, added 40 queries (24 pertaining to previously characterized tables; 16 for tables new to CDM v4.1); revised 27 queries; and deprecated 2 queries. In the Empirical Data Curation report, incorporated PCORnet Data Checks v5, added 1 table and 2 charts, and revised 15 tables.
June 29, 2018	V4.11	Corrected the DIAGNOSIS and PROCEDURES information in Table ID. Added additional DATE_MGMT fields to Table IIB.
Oct 8, 2018	V4.12	Corrected minor bugs in v4.11. Split the data curation program into 3 programs. Separated the data curation and code errors "run" programs. In the Data Curation program, modified the lookback logic to remove the date restriction from the DEATH table and include records with non-missing dates. Added an Empirical Data Curation (EDC) preparation program. In the Empirical Data Curation program, updated the reference files to reflect Cycle 5 results and to exclude LOINC codes which have no variation from Data Check 2.06.
Dec 20, 2018	V4.13	Full data curation for OBS_CLIN and OBS_GEN tables. For the data curation query, added query progress check report; updated Value Set Reference File to v1.5; and added dia_l3_dxtype and pro_l3_pxtype. Updated Potential Code Errors to v6 which incorporates OBS_CLIN, OBS_GEN, and MED_ADMIN. In the Empirical Data Curation report, incorporated PCORnet Data Checks v6, added 4 tables and 1 chart, revised 11 tables and charts and switched to PDF format.
Mar 19, 2019	V4.14	Corrected minor bugs in v4.13 affecting PRO_L3_PXTYPE and Data Check 2.07. Updated the Data Curation Lab Group reference file to v3.1 and the network-wide results displayed in the EDC report to the most recently available data.
Jun 17, 2019	V4.15	Set the low cell count threshold to 0. Added Section IX: Query Input and Output Diagram. Added information about the new CDM Value Set Conformance Query to Section X: Responding to the Query Package.
Oct 7, 2019	V5.10	Additions and revisions to support CDM v5.1 and PCORnet Data Checks v7. In the Data Curation query, added 42 queries (17 pertaining to previously characterized tables; 25 for tables new to CDM v5.1); revised 30 queries; and updated the reference files for Data Curation Lab Groups, RXCUIs, and lab outliers. In the Empirical Data Curation report, revised 21 tables and added 4 tables and 7 charts.
